

miahallen looks at a midrange Sandy Bridge motherboard from Gigabyte.

Gigabyte has been on a role in the last few years with their mid-range lineup of motherboards, specifically the UD3 and UD4 series, have a huge following and are highly regarded within the community. They have earned their spot for good reason too, and the value pricing combined with top notch overclocking capabilities have been a tough act to follow. With the release of Intel's latest platform, will the Gigabyte mid-range hold onto its competitive edge?
