

Miahallen reviews and overclocks Gigabyte's latest P55 Motherboard, the P55-UD3R over at [O verclocker](#)

. Miahallen takes the p55-UD3R, Intel 750, and some good ol' LN2. At the end of his review, he has taken over several HWBot WR for the Intel 750 for SuperPi 1m, PiFast, Wprime 32m, and Wprime 1024m.

So hit the link and check out the great article he wrote and the awesome benching that was done.

Great job and congratulation to MIAHALLEN.
