<p>We're a bit behind with updates to the site, so I'm posting a few older articles to bring us up to speed.◆ First off is a series on mini-ITX systems MIAHALLEN has been working on.◆ He started with a basic mini-ITX build in the miniature Silverstone SG05 case.◆ Not much modding, only air cooling and a pretty simple build that most users could probablu mimic with minimal trouble.◆ Miah completed a full performance review of what this mini machine is capable of, and even included a full accessment of power consumption being put on the barely adequate 300Wstock PSU.◆ He came away very impressed with the performance he was able to extract.◆ The article is a great read, and if you're in the market for a small gaming rig, you own it to yourself to check out the article.</p> <p>Gaming in Tight Spaces v1.0</p> <p></p>
